

1. Download and install VS Code, ensuring you select the "Add to PATH" option during the setup.

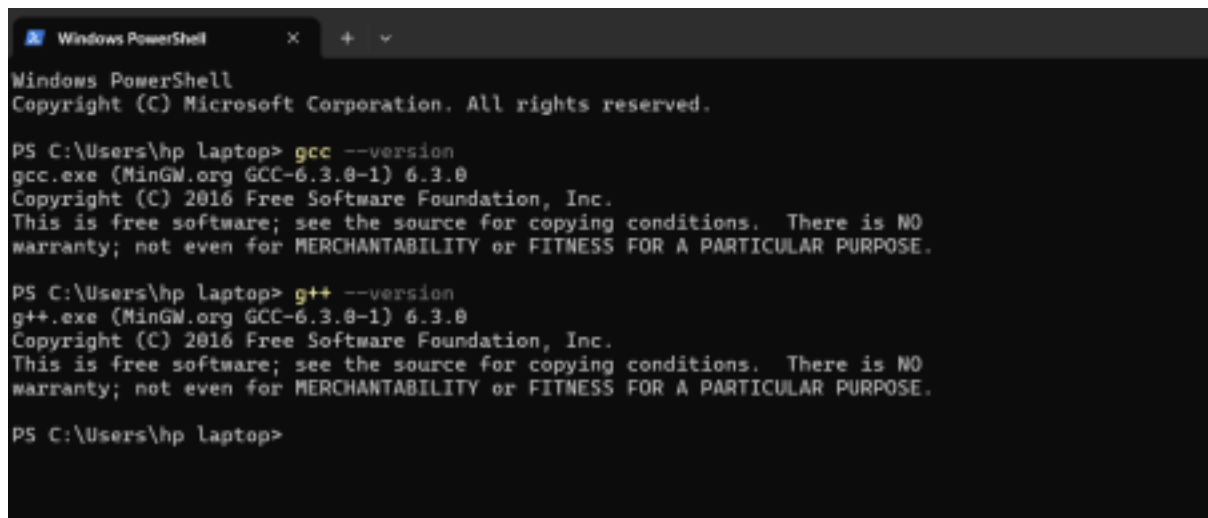

2. Navigate to the Extensions Marketplace within VS Code and install the Microsoft C/C++ extension.

3. Add the path "C:\msys64\ucrt64\bin" to your Windows environment variables, then verify the installation by running "gcc

--version" and "g++ --version" in the terminal.

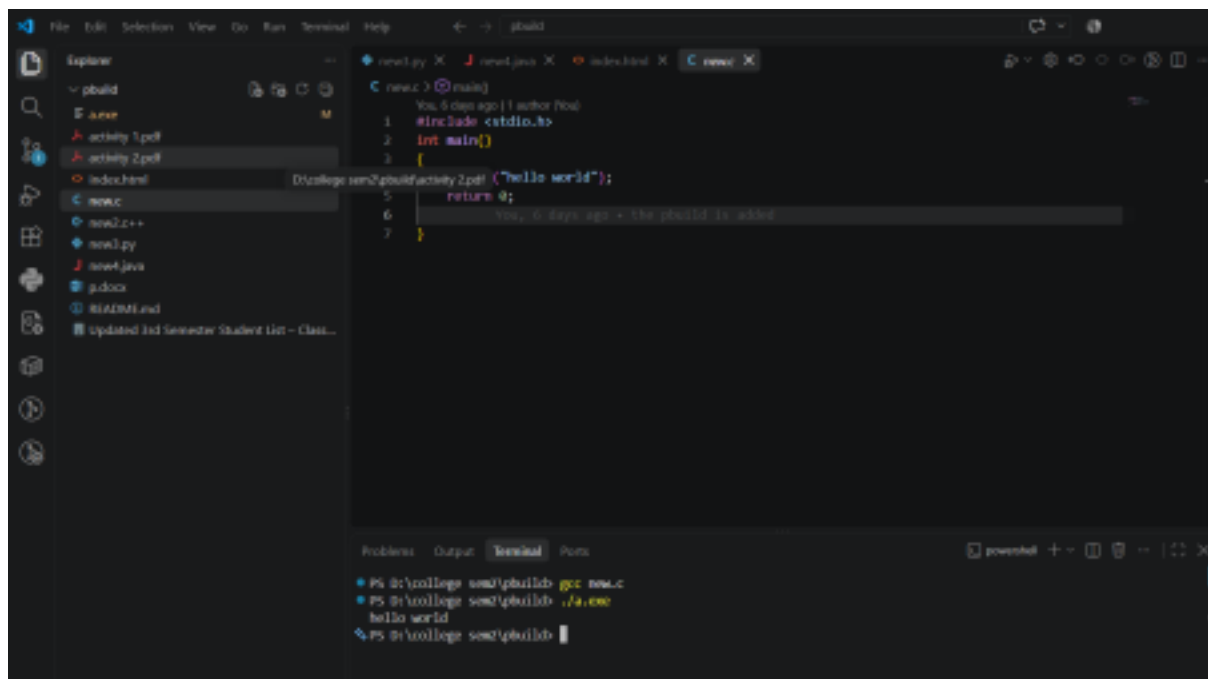

```
Windows PowerShell

```

4. Create a file named "hello.c" in VS Code. Compile it using "gcc hello.c -o hello.exe" and execute the program with ".\hello.exe".

```
File Edit Selection View Go Run Terminal Help
new1.py new1.java index.html new.c
You, 6 days ago | 1 author | host
1 #include <stdio.h>
2 int main()
3 {
4     printf("hello world\n");
5     return 0;
6 }
You, 6 days ago + the pbuild is added

Problems Output Terminal
PS @:\college sem2\pbuild> gcc new.c
PS @:\college sem2\pbuild> ./a.exe
hello world
PS @:\college sem2\pbuild>
```

The screenshot shows the Visual Studio Code interface. The Explorer sidebar on the left lists files in a project named 'pbuild', including 'new2c++'. The main editor window displays the code for 'new2c++', which is a C++ program that prints 'hello world this is c++' and the values of variables 'a' and 'b'. The terminal at the bottom shows the command 'g++ new2c++.cpp -o a.exe' and the output of the program.

```
new2c++ > main()
// new 6 days ago 11 author (find
1 #include <iostream>
2 using namespace std;
3 int main()
4 {
5     cout << "hello world this is c++"<<endl;
6     int a = 10;
7     cout << "value of a is: " << a<<endl;
8     int b;
9     cin>>b;
10    cout << "value of b is: " << b<<endl;
11    return 0;
12 }
```

Terminal Output:

```
g++ new2c++.cpp -o a.exe
hello world this is c++
value of a is: 10
```
