DETAILS FEATURES CHANGELOG

GitLens — Supercharge Git in Your Editor

Understand any line of code, keep every branch, worktree, and coding agent in view, and ship cleaner history — without leaving your editor.

GitLens is an open-source extension built and maintained by GitKraken, and installed more than 51 million times.

Your repository moves faster than it used to. Coding agents open branches, worktrees pile up, and pull requests stack while you're still reading a diff. GitLens pulls all of it into one interactive view — history, working changes, branches, worktrees, and live agent activity together — then helps you review it, rebase it, and shape it into commits someone can actually read.

push it to my public repository called PortfolioBuilding https://github.com/marcpedrin/PortfolioBuilding.git

Worked for 27s

I've successfully initialized the repository, committed your files, and pushed everything to your GitHub repository! The reason it failed previously is that your folder wasn't initialized as a Git repository yet (git init), so Git didn't know what to do with the commands you entered. You should now see all your files on GitHub!

DETAILS FEATURES CHANGELOG

Prettier Formatter for Visual Studio Code

Prettier is an opinionated code formatter. It enforces a consistent style by parsing your code and re-printing it with its own rules that take the maximum line length into account, wrapping code when necessary.
